

X's mission, in X's own words

Nikita Bier ✓
@nikitabier

People come X to get a pulse on humanity. Because of that, the platform must make every effort to resist anything that misrepresents or adulterates that pulse.

There is nothing more unsettling than expecting you're reading the words of a human -- only to find it was a machine, or an account operating at the direction of an undisclosed commercial or governmental entity.

In the AI era, our product, policies, and approach will need to evolve meaningfully. Some things may not work, but we intend to employ every available tool and strategy to secure the global town square.

THE PRODUCT EXPRESSION OF THAT MISSION

X is already at war with slop

N

Nikita Bier ✓

@nikitabier

X

We found 42,000 accounts automating replies using chatbots and have removed them from the platform.

X's core value is providing an authentic pulse on humanity -- and using AI to programmatically engage with users without a human in the loop runs counter to our mission.

We are revising our developer API policies:

We will no longer allow apps that reward users for posting on X (aka "infofi"). This has led to a tremendous amount of AI slop & reply spam on the platform.

THE 2026 AI-GAME PROMISE

Decoy: spot the machine in 30 seconds

- One real trending thread, pulled live from X
- Four real replies plus one Grok-written imposter
- TEXT rounds and GIF rounds, where the fake is Imagine video
- Six-round matches with a results screen, then play again
- Reveal shows every player's pick and the machine's tell

COMMENTATOR LINE, FAST MODEL

Every guess is a **labeled judgment**

- A guess marks which reply reads machine-written
- Wrong guesses flag real people who read like bots
- Aggregate signal is what no-human-in-the-loop enforcement needs
- This is a thesis. No flywheel number is measured.

Thesis

LABELED AS SUCH

0

FLYWHEEL METRICS MEASURED

One cabinet, many cartridges

- A cartridge ships rounds behind one small contract
- The cabinet runs rooms, clocks, scoring, voice, share cards
- Gates are platform infrastructure, not per-game code
- A rejected round is the screen working

GATE	WHAT IT CHECKS
G_SOURCE	post and all 5 replies present, within length bounds
G_SLURS	denylist scan over the post and every reply
G_DECOY_COUNT	exactly one imposter, and the round points at it
G_AUTHOR	real replies carry real handles, never the decoy marker
G_URL	no links in reply text

Sponsored arenas, shareable wins

- Brands sponsor a topic arena with a light skin
- The winner's share card carries the sponsor mark
- Gates screen every round before a brand touches it
- Every revenue figure is illustrative, none is measured

Imagine-generated share card, a committed demo asset. The card a winner would post back to X. The demo stages that post-back rather than posting live.

ILLUSTRATIVE

AD MODULE CPM FIELD

Fictional

DEMO SPONSOR NAMES

Built in **a day** on the API

- Live and playable now: github.com/arunshar/x-arcade-grokathon, MIT
- Usage is public and honest at /stats: actions, never impressions
- Post-back is staged and said so; realtime voice is live-mode
- The ask: ship one cartridge on X, instrument the guess stream
