

X's biggest embarrassment, now a game

X suspends about 208 bot accounts a minute (reported, Apr 2026) · Spotting the fake is already entertainment on X · X Arcade turns it into a two-player game

~208/min

BOT SUSPENSIONS, REPORTED

ONE ROUND

Nobody owns games at X this week

- X has never shipped a game in twenty years
- Musk promised an xAI-studio AI game by end of 2026
- That promise is still unshipped
- X's head of product resigned on 5 August
- WeChat shows mini-games can anchor a super app
- Source: research sweep, public reporting

THE 2026 PROMISE

Aug 5

PRODUCT HEAD RESIGNED

Decoy: spot the machine in 30 seconds

- One real trending thread, pulled live from X
- Four real replies, read verbatim from the thread
- One Grok-written imposter hidden among them
- Two players race to tap the fake
- Reveal shows real authors and the imposter's rationale

ON THE CLOCK

- X_SEARCH TO REVEAL

Live thread in, **five gates** before play

Gates rejected 1 of 6 rounds built today (G_SOURCE + G_URL), so 5 serve

Proven offline: full two-player round, zero network egress (artifacts/integration_trace.txt)

VOICE TOKEN MINT

Every guess is a **labeled judgment**

- A guess marks which reply reads machine-written
- Wrong guesses flag real replies that read like bots
- Aggregate signal is what bot detection wants
- This is a thesis. No flywheel number is measured.

Thesis

LABELED AS SUCH

0

FLYWHEEL METRICS MEASURED

One cabinet, many cartridges

- A cartridge ships rounds behind one small contract
- The cabinet runs rooms, scoring, voice, share cards
- Gates are platform infrastructure, not per-game code
- They rejected 1 of 6 rounds built
- Second cartridge Crux exists as a sketch

GATE	WHAT IT CHECKS
G_SOURCE	post and all 5 replies present, within length bounds
G_SLURS	denylist scan over the post and every reply
G_DECOY_COUNT	exactly one imposter, and the round points at it
G_AUTHOR	real replies carry real handles, never the decoy marker
G_URL	no links in reply text

GATES, FAIL CLOSED

Sponsored arenas, shareable wins

- Brands sponsor topic arenas with a light skin
- The winner's share card carries the sponsor mark
- Gates screen every round before a brand touches it
- All revenue figures are illustrative, none are measured

Imagine-generated share card, a committed demo asset. The card a winner would post back to X. The demo stages that post-back rather than posting live.

Built in **a day** on the API

- Code: github.com/arunshar/x-arcade-grokathon, public, MIT
- Built before this event
- Post-back and video are staged, said openly
- The ask: ship one cartridge on X, measure the flywheel
